

Supplementary Figure 1

Trends in hepatitis C inpatient charges by age cohort and diagnosis group, 2001-2010.

Supplementary Figure 1 Legend: Data from Nationwide Inpatient Sample (NIS). Inpatient charges inflation-adjusted to 2010 dollars using the Consumer Price Index for inpatient services. Median charge calculated with appropriate survey design weights applied. Liver-related complication defined as chronic liver disease or cirrhosis, liver abscess and sequelae of chronic liver disease, other disorders of the liver, ascites, esophageal varices, hepatocellular carcinoma, or hepatorenal syndrome.

Percent change in median charge from 2001 to 2010:

A) younger 26.7%; baby boomer 43.3%; older 16.4%

B) younger 3.0%; baby boomer 17.8%; older 13.8%

C) younger 28.1%; baby boomer 27.7%; older 19.9%

D) younger 18.8%; baby boomer 17.8%; older 27.3%

HCV=hepatitis C virus
